

Sirocco 'HV' with 'Trans Port' Silencer

OUTSTANDING
ACCURACY

1/2" Group at 40 yards

It's a break barrel action fitted with our patented H.E. gas spring power unit that uses a lightweight piston with floating inertia weight. This system gives consistently low recoil plus accuracy other spring type rifles can only dream about.

The stock is made from the beautiful African hardwood called hyedua (*shed-u-a*). Very strong and stable in use and extremely pleasing to the eye. All unwanted weight has been machined away to leave you with an elegant, attractive sporting stock that is available in either left or right hand. It also features a chequered pistol grip and forend.

Anschütz barrels are used in .177 and .22 and selected Walther barrels are used in .20 calibre. The Evolution trigger mechanism, based around the falling block system, is a fully 2 stage unit with adjustment for second stage weight and travel. It also has an automatic safety catch. The scope mount system is our rigid two piece set up which bolts into a fixed ramp, so no creep or loss of zero. A Dampa Mount is available for FAC versions, but unnecessary on this low recoil rifle and would not be of any benefit.
