

Rapid MkI Pre-Charged Pneumatic

12ft/lbs or FAC

**all calibres
all powers**

OUTSTANDING
ACCURACY

**12ft/lbs Rapid MkI with a Vortex Silencer
Whisper Quiet Combination**

This is the rifle made for the hunter. Pull back the bolt and the pellet is into place. Close the bolt and you are ready to fire. All this can be done in a second without taking your eye from the scope. This ultra quiet hunting rifle is devastating in any shooting situation. The world class Anschütz barrels fitted to .177 and .22 calibres and selected Walther barrels on .20 and .25 calibres see to that. Seven or twelve shots in .22 cal, twelve shots in .20 and .25 or 17 shots in .177 calibre can be taken with deadly accuracy with minimum fuss, utilising the same faultless magazine system proven on the SLR 88/98.

Optional Accessories

7, 12 or 17 Shot
Magazines
(depending on cal)

Upgrade to the **Large Bolt Handle**
(as fitted to the Rapid MkII & MFR)
for a more comfortable grip.

Always know the energy of your rifle
with a **Chrony Chronograph**.
Powered by one 9v battery so can
be used almost anywhere.

See accessories sheets for full range

The .22 and .177 calibres are most popular in the UK as there is a large selection of pellets to choose from. Accuracy is outstanding in both calibres and they are available in 12ft/lbs and FAC specification.

The .20 calibre is the most popular calibre in America, the reason being, that it hits as hard as a .22 calibre but is flat shooting like a .177. It will transform your approach to shooting whether targets or live quarry. The effective range of a 12ft/lbs version will impress even the most discerning air gunner. However, the FAC version shows this as the most efficient of all calibres. The combination of weight against a relatively small cross sectional area makes long range highly accurate shooting a reality.

The .25 calibre is only available in FAC and is fitted with a longer barrel. It has adjustable power; for example, using 27 grain H&N Ram Points you can get between 33ft/lbs with 70 shots to 40ft/lbs and 33 shots just by adjusting the rear cap. Best accuracy is achieved with 30 grain H&N Baracuda, lightweight pellets exceed 900 fps.

All of the Rapid Range of rifles are available an FAC version. All can achieve a humane killing distance of 60 yards, although it is possible to kill at a distance of 70/80 yards if you have the skill & marksmanship.

No other manufacturer comes near to the reliability and accuracy achieved from the Theoben 7, 12 or 17 shot magazines.

Specifications

- ⊕ Bolt action pre-charged pneumatic
- ⊕ 12ft/lbs and FAC
- ⊕ .177, .20, .22 and .25 calibres
